

Photograph album

You have experienced a tropical rainforest environment and seen the plants and animals that live there, now it's time to create a photograph album to show everyone what you saw and learnt.

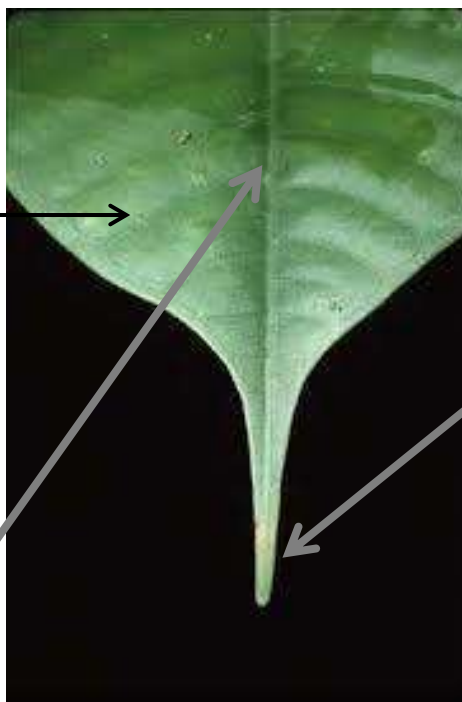

Your task: create an album with (at least) 5 photographs.

Each photograph needs to:

- Show a plant or an animal
- Have annotations (detailed labels) that **DESCRIBE (D)** the adaptation
- Have annotations that **EXPLAIN (E)** what each adaptation does/why it is needed

Below is an example to follow.

D: The leaves are thick and waxy.
E: This waxy layer stops the plants from losing water from its leaves and reduces transpiration.

D: The leaf has a long pointy tip - a drip tip.
E: This drip tip allows the heavy rainfall to run off the end of the leaf quickly, without damaging the leaf.

D: The leaf is very wide.
E: This allows the leaf to absorb more sunlight, increasing photosynthesis.
